The majority of people in the ancient world, however, only ate meat on special occasions such as after sacrifices; vegetables, fruits, pulses, grains, and olive oil provided the bulk of calories (Megaloudi, 2006).

[People and plants in ancient Pompeii: a new approach to ...](#)

The evolutionary relationships between plants and people are complex. Peter Raven, one of the most important figures in plant biology and whose work is also featured in this issue (Raven, 2019), determined the term "coevolution" together with colleague Paul R. Ehrlich (Ehrlich & Raven, 1964). Coevolution is the process by which species interact with and respond evolutionarily to each other—a definition that encompasses several relationships between plants and humans.

Exploring these and other important plants used for millennia by humans, Ancient Plants and People presents a wide-angle view of the current state of archaeobotanical research, methods, and theories. Food has both a public and a private role, and it permeates the life of all people in a society. Food choice, production, and distribution probably represent the most complex indicators of social life, and thus a study of foods consumed by ancient peoples reveals many clues about their lifestyles.

Archaeobotany, also known as Paleoethnobotany, is the study of the relationship between humans and plants in the past. As a discipline with firm roots in the practice of ethnobotany, it places great emphasis on the social and cultural dimensions of plant use through time. Since the 1930s, archaeologists have recognized the wealth of information that can be gleaned from a careful examination of plant data.

#### Ancient People and Plants Laboratory

Ancient Plants and People is a timely discussion of the global perspectives on archaeobotany and the rich harvest of knowledge it yields. Contributors examine the importance of plants to human culture over time and geographic regions and what it teaches of humans, their culture, and their landscapes.
