Introduction 1 1-1 1. Introduction The FX2N-32DP-IF(-D) Profibus-DP Interface Unit (hereafter called "32DP-IF") can be used to connect FX2N/FX0N series extension blocks/units and special function blocks/units directly to an existing Profibus-DP network. The 32DP-IF provides an intelligent slave function for decentralized control applications.

Profibus DP is a device-level bus that supports both analog and discrete signals and is widely used across industry with devices such as remote I/O systems, motor control centers, and variable speed drives. Profibus DP communicates at speeds from 9.6 Kbps to 12 Mbps, over distances from 100 to 1,200 meters.
